Gross Domestic Savings is the difference between gross domestic product (GDP) and final consumption expenditure (total consumption) and usually indicated as a percentage of GDP. Empirical analyses indicate that the availability of domestic savings in financing investment has an important role in sustaining a long-term economic growth. Current account deficits may not increase as investment is financed through domestic savings. Additionally, economies are also less vulnerable to exchange rate shocks when investment is financed through savings. The domestic saving rate is a key measure to monitor macroeconomic developments. It could help to understand whether a country is on track to achieve the Sustainable Development Goal of promoting sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.

The OIC countries group recorded a 30.5% gross domestic savings rate in 2018, a 0.1 percentage-point decrease compared to that in 2000. While the Developed countries group (ED) also experienced a 1.1-percentage-point decrease in the period 2000-2018, the Non-OIC Developing countries group (ING) and the World (WD) increased their gross domestic savings rates by 10.1 and 3 percentage points, respectively.

While 34 OIC countries increased their gross domestic savings rates, 23 of them were observed with a decrease from 2000 to 2018.

At the individual country level, the OIC countries varied considerably in gross domestic savings rates. The difference between the highest and lowest domestic saving rate across OIC countries was very close to 91 percentage points in 2018.

The highest domestic savings rates were recorded in Turkmenistan (TM), Qatar (QA), Brunei (BN), UAE (AE), and Suriname (SR) with over 50% in 2018. 16 OIC countries were also observed to have domestic saving rate between 30% and 50% in that year.

The strong performing OIC countries in savings rate were Afghanistan (AF), Turkmenistan (TM), Chad (TD), Suriname (SR), Djibouti (DJ), Uzbekistan (UZ), Burkina Faso (BF), Azerbaijan (AZ), Kazakhstan (KZ), Sudan (SD). and Benin (BJ) with over a 10-percentage-points increase over 18 years.

On the other hand, 8 OIC countries, namely Jordan (JO), Tajikistan (TJ), Gambia (GA), Lebanon (LB), Comoros (KM), Sierra Leone (SL), Palestine (PS), and Yemen (YE) were with negative domestic savings rates in 2018.

**Note:** The OIC countries observed with a decrease in gross domestic savings rates are shown in red colour and lie below the diagonal line.
