PARIS 21

Partnership in Statistics for
Development in the 21st Century

What we are NOT

- 21st district in Paris
- (only) statistical nerds
- OECD - DAC

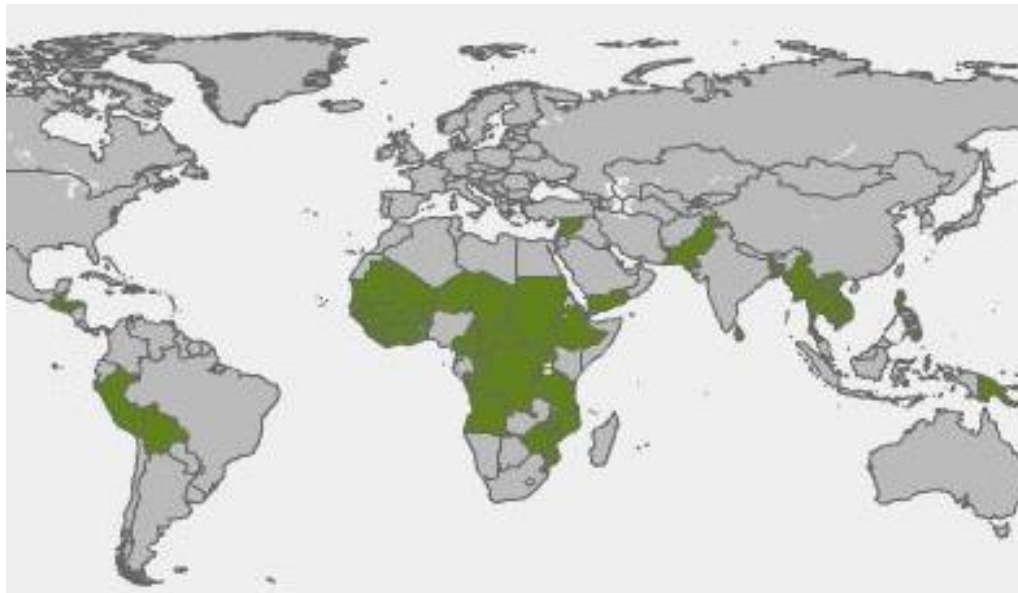

PARIS21: Global partnership on statistical capacity development

National & Regional

- Strategic planning (NSDS & RSDA)
- Advocacy
- Data (e.g. micro-data dissemination)

Global

- Co-ordination (BAPS, PRESS)
- Knowledge sharing

Why a **data revolution**, why now?

The challenge

- **Old problems**
 - Data gaps
 - Communication
- **Emerging priorities**
 - National data for global development goals
 - New indicators for new areas

The opportunity

- **Positive lessons from MDGs**
 - More surveys, data and statistics available
 - Statistical capacity efforts – NSDS as strategic approach
- **Countries are well positioned**
 - Existing structures
 - Growing capacity to generate; analyze; store data
 - Innovations and momentum for change

The IDR project is...

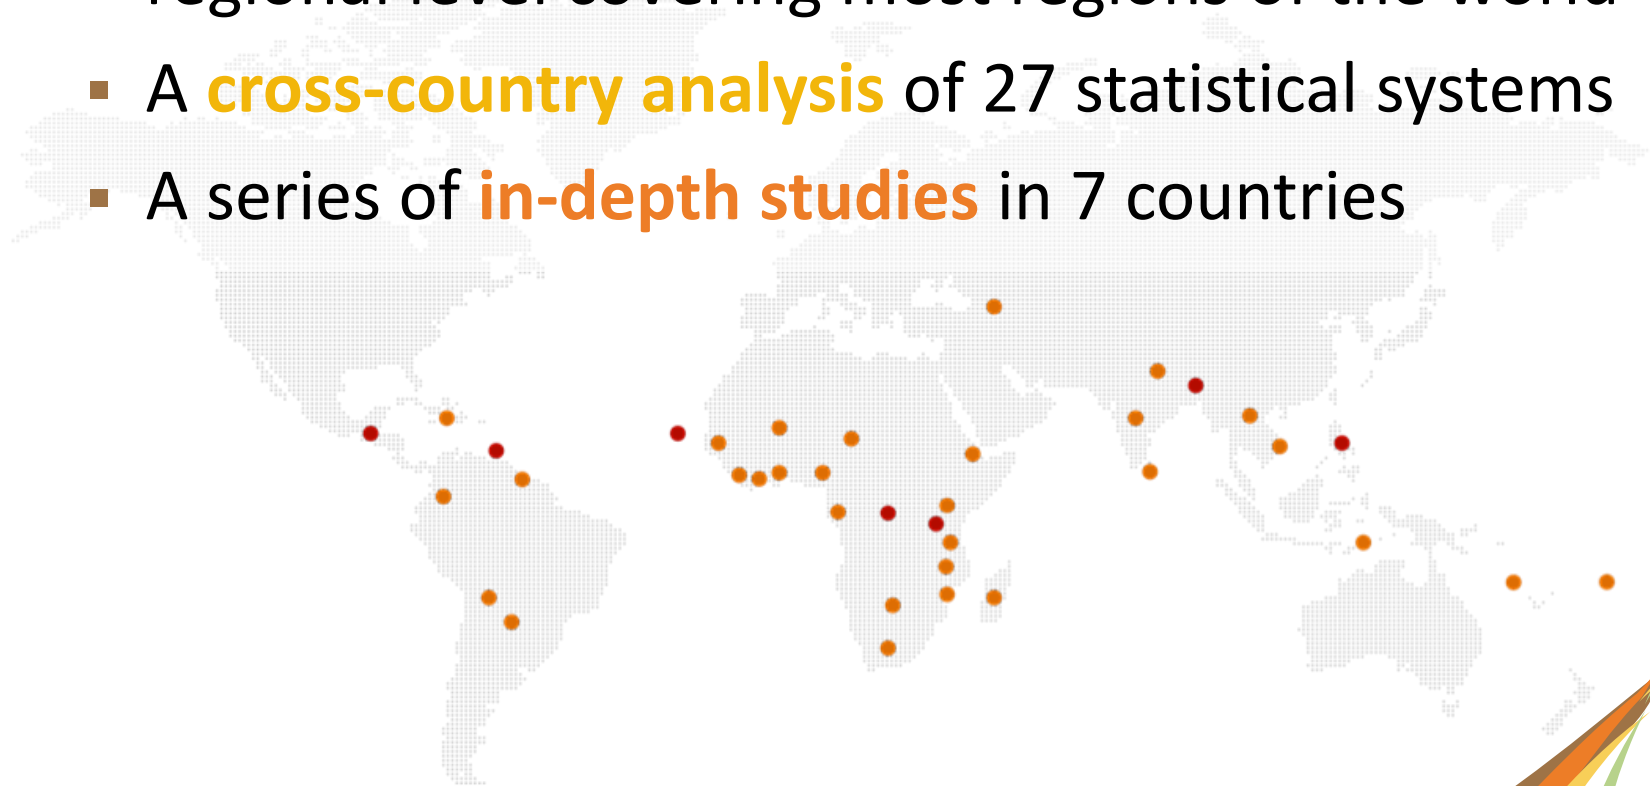

- **taking stock** of data supply, demand, and gaps in a number of developing countries
- **exploring innovations**: Innovations Inventory and the Metabase
- carrying out a **research program**
- producing a **Road Map** for a Data Revolution
- funded by the Gates Foundation.

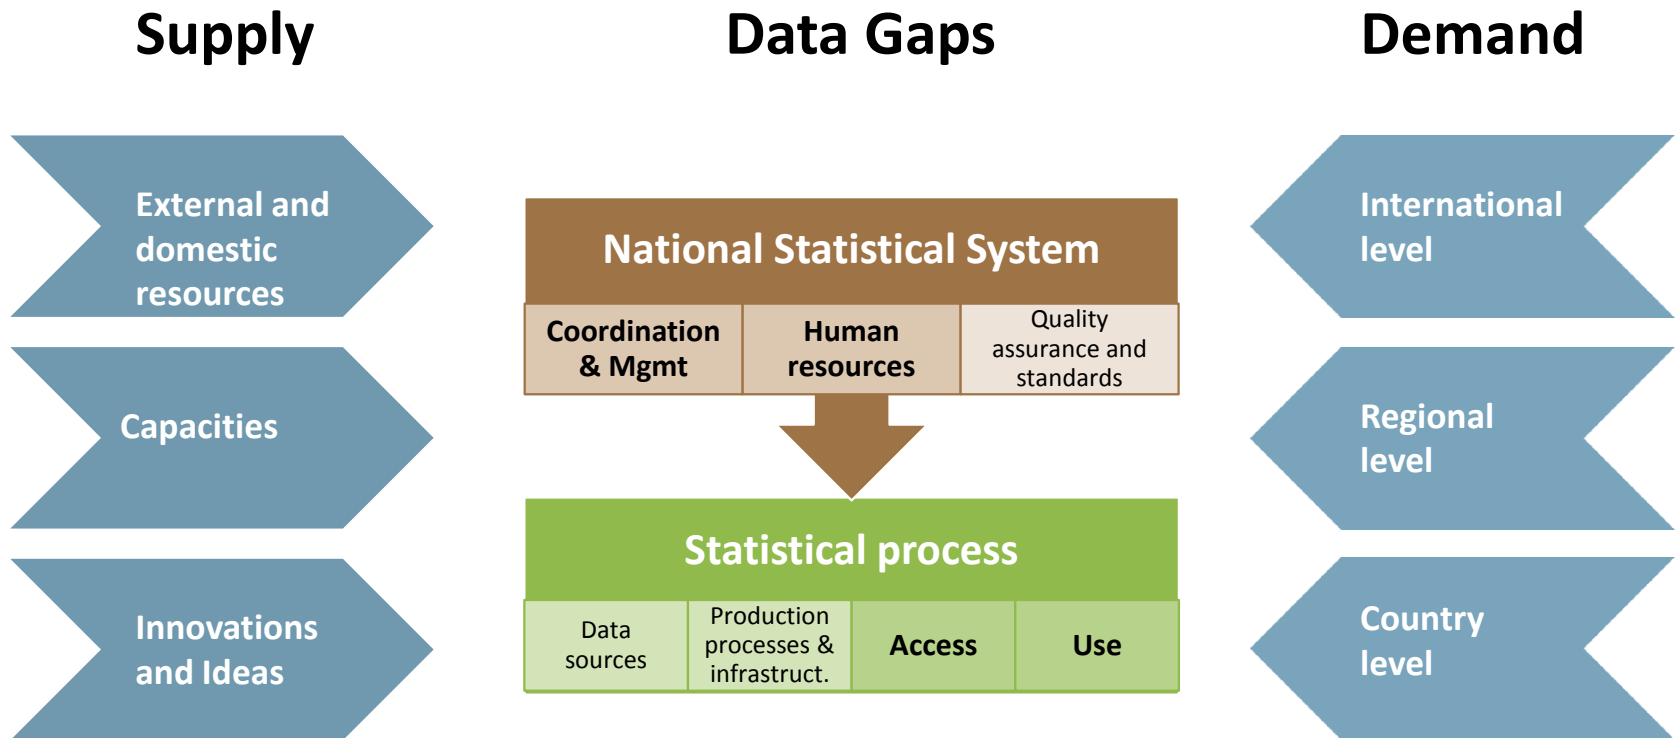

Data needs identified in the IDR project

Needs assessment based on:

- A series of **working papers**
- A series of **consultative workshops** at country and regional level covering most regions of the world
- A **cross-country analysis** of 27 statistical systems
- A series of **in-depth studies** in 7 countries

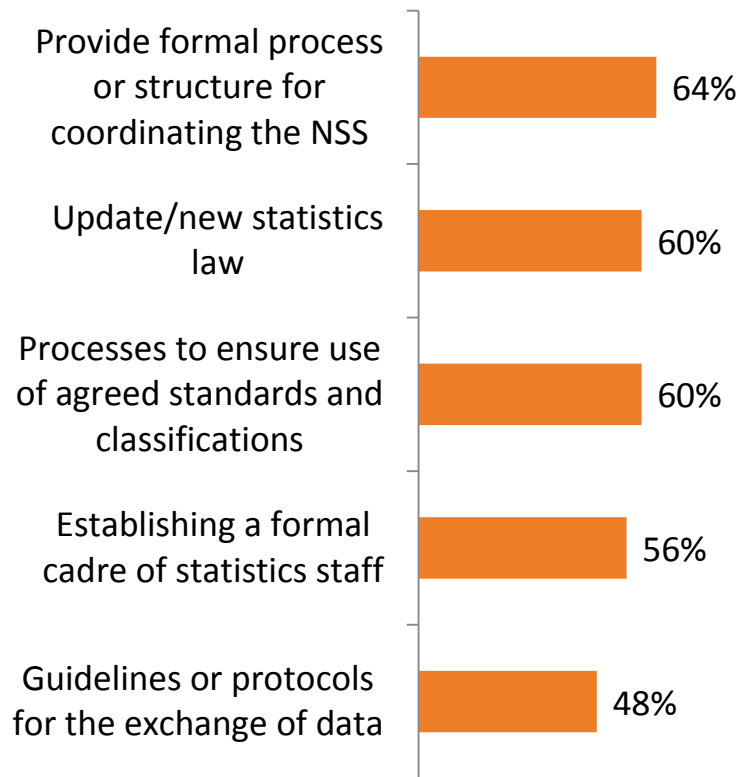

Needs Assessment: Conceptual framework

1. NSS Coordination & Management

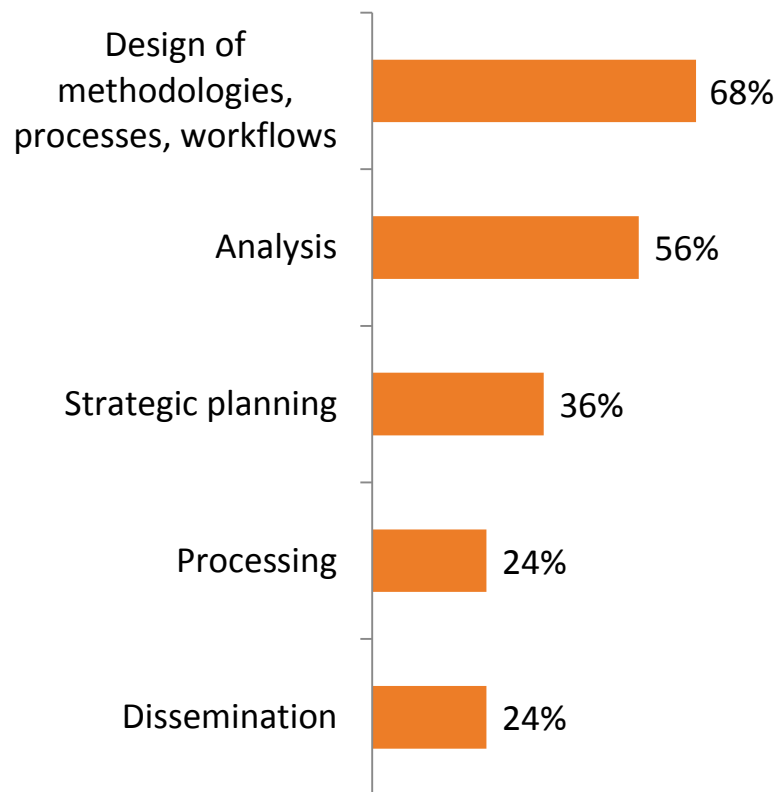

Priorities for management and coordination

- NSDS used in nearly all countries
- Co-ordination within NSS remains weak

2. Developing people & skills

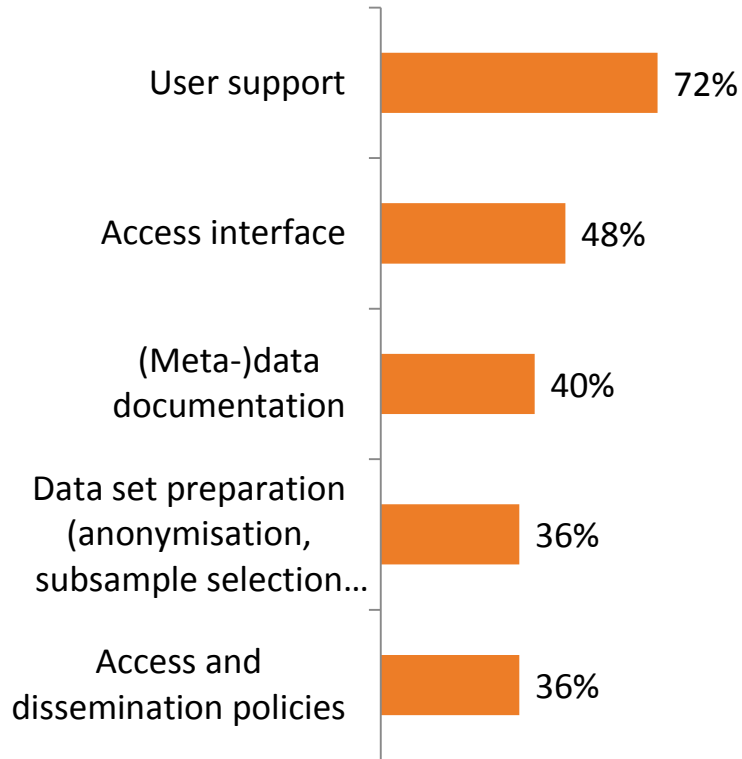

Priorities for skills development

- Half the countries surveyed don't have an annual training plan in place for more than half of their professional staff

3. Data access and use

Country priorities for Improving data use

- User support is a key priority in 72% of countries
- Only 10 of the 25 countries hold periodical user-producer dialogues or conduct regular user satisfaction surveys

Summary

1. Fixing basic nuts and bolts of statistical production - **revolution as evolution**
2. System-wide coordination and management
3. Investing in human resource development
4. Data dissemination & use are a priority area

Recommendations in the IDR Road Map

The IDR Road Map

A ROAD
MAP FOR A
COUNTRY-LED
DATA
REVOLUTION
PARIS21

The IDR Road Map – 3 Big Ideas

- 1. Increased funding:** This report calls for Official Development Assistance (ODA) for statistics to rise from around 0.5% of ODA at present to around 1%.
- 2. Data compact:** This report recommends creating a system where countries sign up to a limited set of basic principles and receive, in return for progress, enhanced and flexible financial and technical assistance.
- 3. Progress report:** This report calls for the establishment of an annual Data for Sustainable Development Report, prepared by PARIS21, to measure countries progress in developing their statistical capacity and to report on funding for statistics.

Case study – Big data for development

Source:

Bruckschen, Schmid, Zbiranski (2015). Cookbook for a socio-demographic basket, D4D: Orange Data for Development Challenge.

Big Data for Development

Population Statistics:
Census or civil registration

Sample Surveys or Administrative Data

Non-traditional (Big Data)

- Transaction Data
- Social Media Data
- Search Queries
- Satellite Imagery
- Mobile Phone Data

-> Traditional Enterprise Data

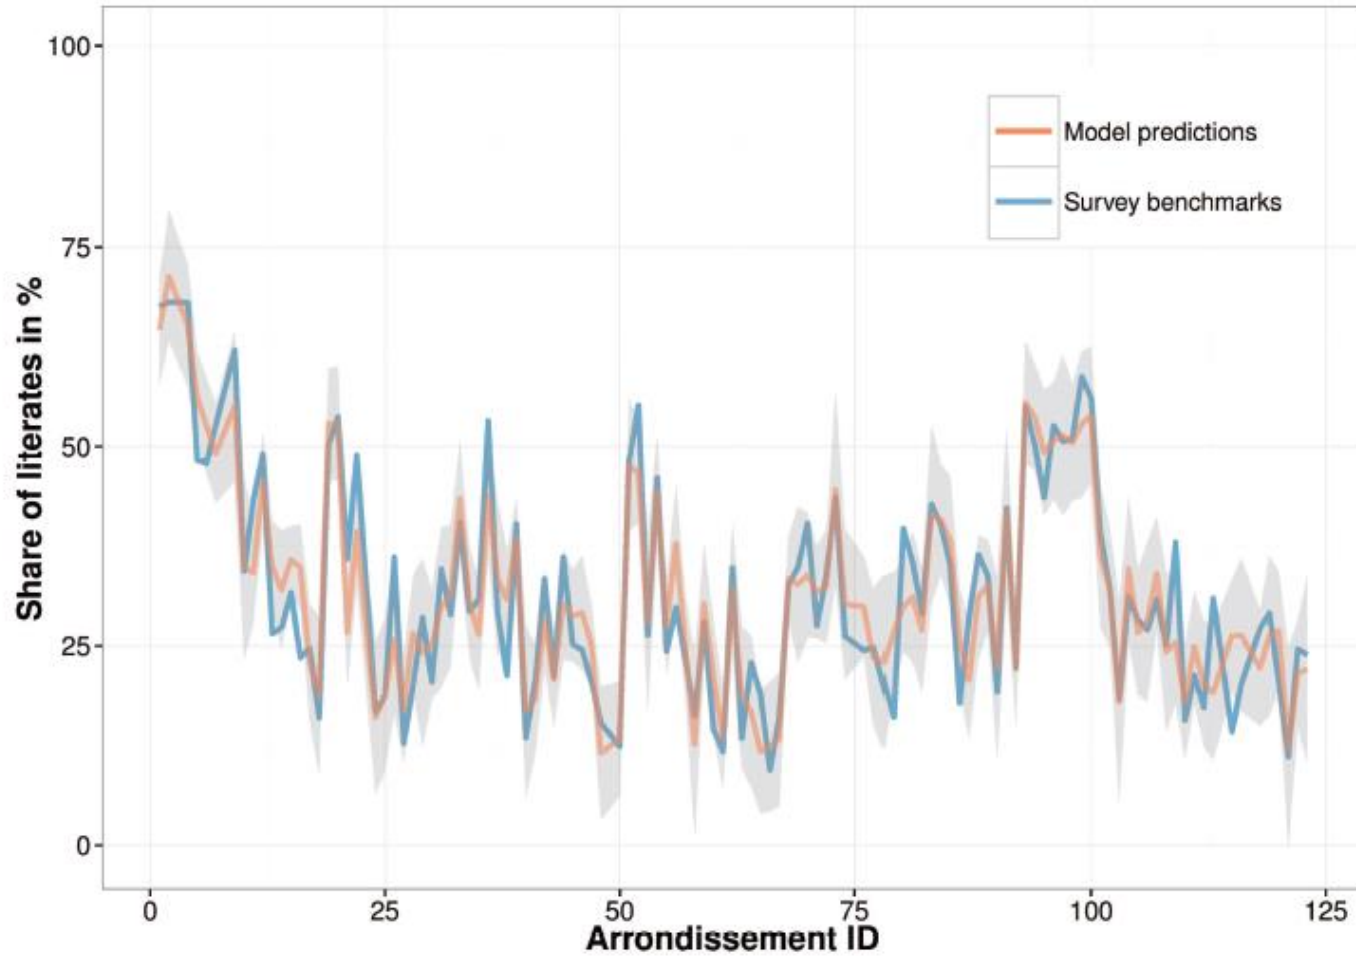

} Social Data

} Machine-generated / Sensor Data

Can “big data” substitute for surveys?

- **Hypothesis:** mobile phone user behaviour reveals socio-economic characteristics
- **Approach:**
 - re-build survey data with model using “call logs”
 - estimate literacy level on monthly basis
 - consistency check with survey results
- **Call logs:** location (antenna +/- 2km), time, emitter and receiver (identifiers)
- **Advantage:** cheap, granular, timely

County level fit

Literacy levels in Senegal

How the international community sees it

How a national policymaker sees it

How national policymakers could see it

In conclusion

- **Benefits of big data**
 - Applications in various fields
 - New business opportunities and possibilities to foster innovation
 - Leap-frogging potential (e.g. Stats in DC's)
- **Methodological challenges and risks**
 - Spurious relationships and sampling bias
 - Bigger questions: privacy, regulatory framework, trust, skill development
