The Applications of the Patient and Personal Security

DEMET HAYALİ YILDIRIM
SPECIALIST
Quality Coordinator

Patient and Personal Security

- In this presentation, you will learn about the measures and optimisations to prevent any potential harm to patient and personel.

The Regulations About the Patient and Personal Security

- The Regulations of Performance and Quality in Health Sector
- The Regulations of Patient and Personal Security
- The Regulations of Patient Rights
- The Circular of the Application of the Patient Rights
- The Circular of the Personal Security
- The Circular of the Prevention of Mobbing
- The Regulations of the Control of Medical Waste
- The Regulations of the Job Health and Security
- The Guide for Working with Antineoplastic Medicines
- The regulations for the Radiation Security

The Goals of Patient Security

- ✓ Providing proper identification
- ✓ Providing transfusion security
- ✓ Providing information security
- ✓ Providing lab security (test security)
- ✓ Providing facility security
- ✓ Providing patient informatory and receiving patient's approval

- ✓ Providing secure surgery
- ✓ Providing drug security
- ✓ Providing device security
- ✓ Providing radiation security
- ✓ Infection control and prevention
- ✓ The installation of the security logging system
- ✓ Providing the prevention of the falls

The Goals of Personal Security

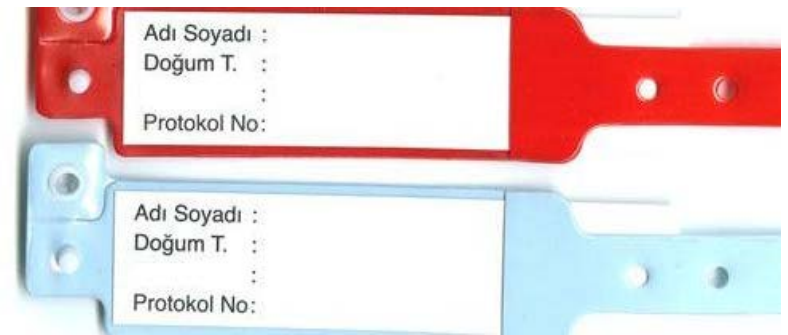

- ✓ The minimization or removal of the risks after risk analysis
- ✓ Personal-oriented health screening on a regular basis
- ✓ Providing the usage of personal protection devices
- ✓ Minimization of the injures caused by sharp equipments
- ✓ Infection control and prevention
- ✓ Providing facility security

- ✓ Providing radioation security
- ✓ Prevention of the violence to the personel
- ✓ Providing ergonomics
- ✓ Ergonominin sağlanması
- ✓ Mnimization of noise
- ✓ Providing psychological support
- ✓ Taking precautions for the dangerous substances

Description and Confirmation of the Patient Identification

OBJECTIVE;

To provide the proper application to the proper patient for all the operations after the patient checked-in.

Description and Confirmation of the Patient Identification

- ✓ Every checked-in patient has given a white wristband.
- ✓ The red colored identification is used for the allergic patient.
- ✓ The barcoded wristband that is used for patient identification has the information below on it:
 - ✓ Patient full name
 - ✓ Protocol number (with big and bold font)
 - ✓ Birthdate (dd-MM-yyyy)
- ✓ Patient room# and location are not used

The identification that is used for psychiatric clinic patients must be determined by the hospital.

The Usage of the Identifier and Confirmation

- When mother gives birth,
- When the patient has been moved to other clinic,
- When any allergy detected:
- When the identifier is malfunctioned.,

- The identification confirmation of the patients is done by active communication technique.
- A training on the identifier and the confirmation process is offered to the patient, his/her relative and personel.

Transfusion Security

- Objective;
 - ✓ Minimization of the wrong transfusion applications
 - ✓ Providing the security of the patient and the donor.
 - ✓ Providing the personel security.

Transfusion Security

- ✓ The request of blood and/or blood product
- ✓ Identification confirmation
- ✓ The control of the cross-comparison test results
- ✓ Monitoring the vital symptoms
 - ✓ It covers the required actions on an event of transfusion reaction.

Transfusion Security

- Cross comparison test results and patient information shall be confirmed by two health care staff before transfusion
- Two health care staff shall confirm just before transfusion:
 - ✓ The expiration date of the product,
 - ✓ Identity of the patient,
 - ✓ Type and amount of blood and/or blood product,
 - ✓ Planned time of transfusion of the product

The Security of the Transfusion Process

- The first 15 minutes of the transfusion must be observed by the personel.
- The vital symptoms must be monitored every 40 minutes during the transfusion.

Information Security

- The protection of the information from unauthorized access, use, disclose, destruction and change.

Laboratuvar Güvenliđi/Test Güvenliđi

➤ *Lab security;*

It is the usage of the rules and procedures during the act of working in order to protect the personel and the work materials.

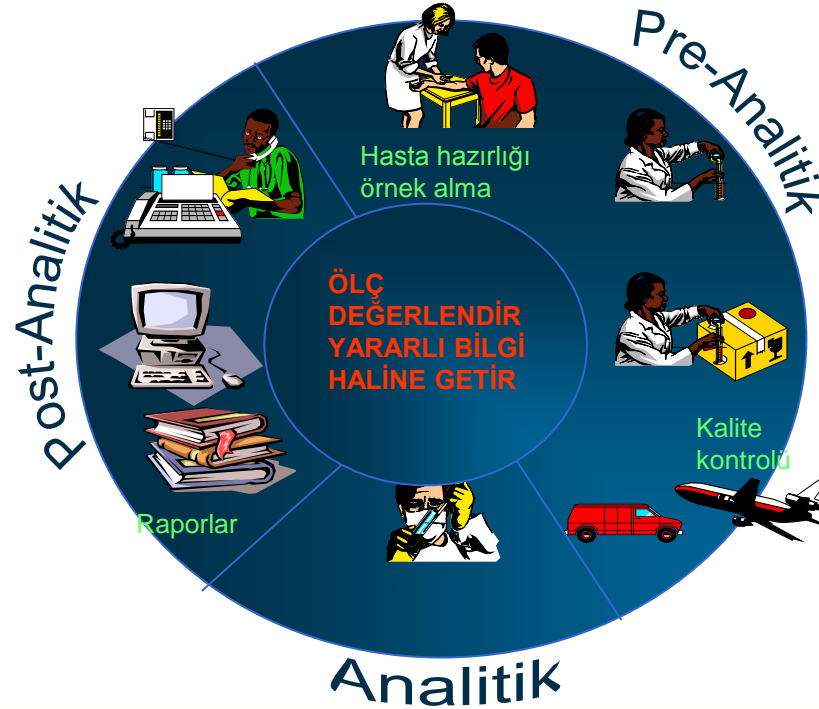

➤ *Test security;*

It is the process in order to get the proper sample for the tests.

LAB SECURITY / TEST SECURITY

- It is required to create a system in order to provide the test and patient security for all the processes: pre-analysis, analysis, post-analysis.

FACILITY SECURITY

- In order to provide a continuous and secure services to patients and personel, it is required to keep the physical, technical and humanistic capacity ready.

Providing the Facility Security

- ✓ The examination of the data gathered from building monitoring.
- ✓ Providing the security of the hospital infrastructure
- ✓ Providing the property and human security in the foundation
- ✓ The practice of emergency and disaster management
- ✓ The practice of medical waste management
- ✓ The maintenance and calibration plans of the medical devices

Providing the Facility Security

Facility security covers:

- ✓ Taking precautions in order to prevent facility oriented falls.
- ✓ The continuous and secure service of the internal water, cistern, electrical energy and gas.
- ✓ The periodic control and secure usage of the elevators
- ✓ The periodic control and maintenance of the air ventilation system
- ✓ The regulations for the medical gas systems and pinched gas containers.
- ✓ The regulations for the dangerous substances

Patient Informatory and Approval

- *Objective;*

While taking the health service, it is required to take the patient's approval in order to secure the patient-doctor confidentiality.

Taking the patient's approval and the informatory is very important in terms of economical and judicial factors.

Patient Informatory

- ✓ Informatory covers everything from the presentation of the service to the diagnose during the patient's stay in the hospital.
- ✓ In the informatory, it is required to coveer everything that concerns patient's decision directly or indirectly.

Taking Patient's Approval

- ✓ For every medical intervention and cure, it is required to take the patient's approval.
- ✓ The responsibility is belong the personal who is going to take care of the patient.
- ✓ The patient's approval form must be maximum of 2 pages.

Secure Surgical Applications

➤10 Main Objectives:

1. Right patient, right side
2. Preventing the harm of anesthesia
3. Preventing the loss of respiration
4. Preventing excessive hypovolemia
5. Preventing the allergic reactions
6. Preventing the infection of the surgical area
7. Preventing the sponge in the surgical area
8. Securing the pathology samples
9. Maintaining the team spirit in the surgery
10. Providing the correct logging

• 3 Steps for the Secure Surgical Operation

- Pre surgery
- Surgery
- Post surgery

GÜVENLİ CERRAHİ KONTROL LİSTESİ ^{TR}		Hastanın Adı Soyadı	Ameliyat/Bölgesi	Ameliyat Tarihi	
I. Klinikten Ayrılmadan Önce	II. Anestezi Verilmeden Önce	III. Ameliyat Kesidinden Önce			IV. Ameliyattan Çıkmadan Önce
<p>1. Hastanın; <input type="checkbox"/> Kimlik bilgileri <input type="checkbox"/> Ameliyat <input type="checkbox"/> Ameliyat bölgesi doğrulandı.</p> <p>2. Hastanın rızası kontrol edildi mi? <input type="checkbox"/> Evet</p> <p>3. Hasta aç mı? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır.....</p> <p>4. Ameliyat bölgesi traşi yapıldı mı? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır.....</p> <p>5. Hastada makyaj/oje, protez, değerli eşya var mı? <input type="checkbox"/> Evet..... <input type="checkbox"/> Hayır</p> <p>6. Hastanın kıyafetleri tümüyle çıkarılıp ameliyat örtüsü ve bonesi giydirildi mi? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır.....</p> <p>7. Ameliyat öncesi gerekli özel işlem var mı? <input type="checkbox"/> Lavman <input type="checkbox"/> Mesane Kateterizasyonu <input type="checkbox"/> Varis Çorabı <input type="checkbox"/> Özel Tedavi protokolü <input type="checkbox"/> Diğer <input type="checkbox"/> Hayır</p> <p>8. Ameliyat için gerekli olacak özel malzeme, implant, kan veya kan ürünü hazırlığı teyit edildi mi? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır</p> <p>9. Hastanın gerekli laboratuvar ve radyolojik tetkikleri mevcut mu? <input type="checkbox"/> Evet</p> <p>Liste Sorumlusu: Ad-Soyad, İmza</p>	<p>10. Hastanın kendisinden <input type="checkbox"/> Kimlik bilgileri <input type="checkbox"/> Ameliyat <input type="checkbox"/> Ameliyat bölgesi <input type="checkbox"/> Hastanın ameliyatı ile ilgili rızası doğrulandı.</p> <p>11. Ameliyat bölgesinde işaretleme var mı? <input type="checkbox"/> Var <input type="checkbox"/> İşaretleme uygulanamaz</p> <p>12. Anestezi Güvenlik Kontrol listesi tamamlandı mı? <input type="checkbox"/> Evet</p> <p>13. Pulse oksimetre hasta üzerinde çalışıyor mu? <input type="checkbox"/> Evet</p> <p>Hastanın Risk Değerlendirmesi</p> <p>14. Hastanın bilinen bir alerjisi var mı? <input type="checkbox"/> Yok <input type="checkbox"/> Var</p> <p>15. Gerekli görünümlerle cihazları var mı? <input type="checkbox"/> Yok <input type="checkbox"/> Var</p> <p>16. Hastada 500 ml ya da daha fazla kan kaybı riski var mı? <input type="checkbox"/> Yok <input type="checkbox"/> Var; uygun damar yolu erişimi ve sıvı planlandı.</p> <p>Liste Sorumlusu: Ad-Soyad, İmza</p>	<p>17. Ekipteki kişiler kendilerini ad, soyad ve görevleri ile tanıttı mı? <input type="checkbox"/> Evet</p> <p>18. Ekipten bir kişi sesli olarak hastanın kimliğini, yapılan ameliyatı, ameliyat bölgesini teyit etti mi? <input type="checkbox"/> Evet</p> <p>19. Kritik olaylar gözden geçirildi mi? <input type="checkbox"/> Tahmini ameliyat süresi <input type="checkbox"/> Beklenen kan kaybı <input type="checkbox"/> Ameliyat sırasında gerçekleşebilecek beklenmedik olaylar <input type="checkbox"/> Olası anestezi riskleri <input type="checkbox"/> Hastanın pozisyonu</p> <p>20. Profilaktik antibiyotik sorgulandı mı? <input type="checkbox"/> Kesiden önceki son 60 dakika içerisinde uygulandı <input type="checkbox"/> Kullanılmaz</p> <p>21. Kullanılacak malzemeler hazır mı? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır</p> <p>22. Malzemelerin Sterilizasyonu uygun mu? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır</p> <p>23. Kan şekeri kontrolü gerekli mi? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır</p> <p>24. Antikoagülan kullanımı var mı? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır</p> <p>25. Derin Ven Trombozu profilaksisi gerekli mi? <input type="checkbox"/> Evet <input type="checkbox"/> Hayır</p> <p>Liste Sorumlusu: Ad-Soyad, İmza</p>	<p>26. Gerçekleştirilen ameliyat için sâdû olarak <input type="checkbox"/> Hasta, <input type="checkbox"/> Yapılan ameliyat, <input type="checkbox"/> Ameliyat bölgesi, teyit edildi.</p> <p>27. Alet, spanj/kompres ve iğne sayımları yapıldı mı? <input type="checkbox"/> Evet/Tam <input type="checkbox"/> Hayır</p> <p>28. Hastadan alınan numune etiketlendi <input type="checkbox"/> Hastanın adı doğru yazdı <input type="checkbox"/> Numunenin alındığı bölge yazdı</p> <p>29. Ameliyat sonrası kritik gereksinimler gözden geçirildi mi? <input type="checkbox"/> Anesteziğin önerileri: <input type="checkbox"/> Cerrahin önerileri:</p> <p>30. Hastanın ameliyat sonrası alıdeceği bölüm teyit edildi mi? <input type="checkbox"/> Evet</p> <p>Liste Sorumlusu: Ad-Soyad, İmza</p>		

* Her bölüm, ilgili sorumlular tarafından sesli olarak kontrol edilerek işaretleme yapılmalıdır.

Drug Security

- Drug security covers all the actions in order to prevent unexpected harm to patient and personel.

Drug Security

➤ Objectives;

It covers:

- The management of the drugs that came with the patient
- The management of the drugs that the patient will be using during his/her stay in the hospital
- The management of the drugs that the patient will be using after her/his stay in the hospital
- The management of the drugs with high risks
- The management of the drugs with the green and red prescription.
- The management of the mistakes from the usage of the drugs.
- The management of the unexpected risks from the drug usage.
- The management of the smart usage of the drugs
- The management of the storage policy for the drugs

makes a addictive of
these drugs

Have been using
for 28 years. Did
not do any
addictive.

The Security of the Medical Devices

- The inventory of the medical devices must be kept on department-basis.
- The plans of the calibration and maintenance of the medical devices must be kept.
- The calibration tags must be used on the devices that has already been calibrated.

Radiation Security

- The Fundamentals of the Radiation Security
 - ***Necessity:*** No radiation operation should be allowed that does not provide pure benefit.
 - ***Effectiveness:*** The dosages must be kept as low as possible.
 - ***Personal dosage limits:*** The yearly dosage limits are determined by the international standards and regulations in order to prevent any damage to patient's health.

The Methods to Minimize the Radiation Dosages that the Patients and Personel are Exposed To

- Patients

The Measures In Order to Protect the Personal from Radiation

➤ **Radiation protecters must be used.**

- ✓ The facilities should keep the radiation protecters in different sizes for different personel.

➤ **Dosimeter should be followed up**

- ✓ The dosage after dosimeter monitoring period must be measured
- ✓ Total yearly radiation dosage must be measured
- ✓ The radiation dosages must compared to yearly values determined by the health regulations.

➤ **The consultations of the personal must be done.**

- ✓ Hemogram: Once in 6 months
- ✓ Peripheral smear: Once in 6 months
- ✓ Dermatological consultation: Once in a year

The Equipments for the Personal Protection

• **Gonad Protective**

Troid Protective

Lead Glasses

Lead Gloves

The Prevention of the Falls

- The patient must be examined for the fall risk
- The precautions must be taken for the patients that holds the higher fall risk

- The Quality Management Department must be notified when a patient falls down.
 - The practices in order to prevent future situations must be started immediately.

How to monitor the ratio of the fallen patient?

Indicator cards must be prepared

Monitoring must be done according to the indicator card

The periodic analyses must be done for the indicator cards

Preventive activities must be started when needed

Risk Assessment

- Risk assessment must be done in order to keep the personel security and health on a higher level.
- It must be intented that harms caused by the service presentation must be minimized.

Risk Assessment

Minimal risk assessment:

Radiation

Noise control

Hazardous material

Carcinogenic maternal

Medical wast

infection

Allergen

Ergonomics

İcommunication

violence

- In must be department-oriented.
- Any precautions must be made in order to main the personel security.
- The situations that the personel was exposed must be logged.

The Stages of Risk Assessment

- ✓ Current situation must be detected
- ✓ Hazards must be determined
- ✓ Risks must be identified
- ✓ Precautions in order to minimize the risks must be taken
- ✓ The continuity of the precautions must be maintained
- ✓ The update of the risk assessment must be made

The Applications of the Color Codes

- It is the creation of the emergency situation system in order to detect the risks that are envisioned in the health foundations, precautions in order to minimize that risks and provide the risk management.

The color codes that are used in our country.

Blue Code

- It is the emergency situation management tool in order to interfere with the patient, patient's relative, and all hospital personal.
- It is the only code that is international.

Pink Code

- It is the emergency situation management tool for any case that contains the new-born evasion.

White Code

- It is the emergency situation management tool for any case that contains violence to any hospital personnel.

The Management of the Codes

- ✓ The notification system must be installed
- ✓ Moderators must be identified
- ✓ The organizations and trainings must be scheduled about the codes.
- ✓ The actions must be taken in order to modify the codes.
- ✓ The logs must be kept about the code applications.
- ✓ Practices intended to code applications must be scheduled periodically.

The Health Screening of the Personal

- The health screening of the personal must be made periodically.
- The health screening programme must be prepared.
- ✓ The risks identified on a department and program basis must be prepared towards the opinions of the MDs.
- The results of the screenings must be examined by the specialists.
- The personal must be notified about the results.
- The information security about the screenings must be maintained.

Personal Protection Devices

- The personal protection devices must be used by the personel.
- The personal protection devices must be used on a department basis must be identified.
- The personal protection devices must be reachable at the working areas.
- The training must be scheduled on how to use the personal protection devices.

The Communication Security Among the Personnel

➤ Objective:

- Giving and receiving instructions during the patient care and cure period
- The operations related to the critical test values
- Providing the security among the personnel
- The management of the special signs and abbreviations

The Secure Transfer of the Patients

- It covers:
- ✓ The transfer of the patients to the departments
- ✓ The transfer of the patients out of the hospital
- ✓ The transfer of the patients in the emergency service
- ✓ The transfer of the patients with the special needs
- ✓ The transfer of the new-born, surgery, intensive care, dialysis and psychiatry patients
- ✓ The important points that must be paid attention during the transfer of the patients
- ✓ The usages and availability of the devices that will be used during the transfer
- ✓ The identification of the personnel that are responsible for the transfer

Patient Privacy

- *Patient privacy*, is a private information that the patient wants to keep between the personal and herself/hisself.
- This privacy contains the information about the sickness of the patient as well as his/her physical and mental privacy.

THANK YOU!
