

TQS: Data Dissemination and Usage

Workshop on TQS
16-17 August 2017
Ankara, Turkey

Overview

- Data dissemination and release
- Examples of TQS reports and factsheets
- Further analysis & research
- Questions/Discussion

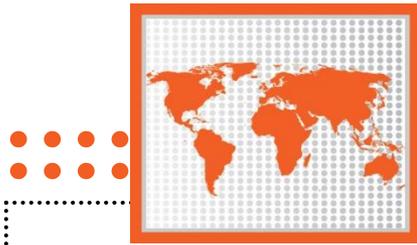

Data dissemination and release

Why is data dissemination important?

- Data produced by TQS enables tobacco control advocates to gain a clear understanding of:
 - The nature, magnitude, and distribution of tobacco use in the country
 - Knowledge, attitudes, and perceptions that influence use
 - The social and cultural context that influences use
- Data provides quantifiable evidence of tobacco use
- Data is a powerful tool for demonstrating the action needed to prevent and reduce tobacco use

Planning for the release of data

- Determine the goal of the TQS data dissemination
- Establish key partnerships
- Determine and highlight key messages
- Identify key audiences
- Develop dissemination tools
- Officially disseminate results/findings

Slovenia

Health impact of tobacco control policies in line with the WHO Framework Convention on Tobacco Control (WHO FCTC)

➔ Based on the current level of adult smoking in Slovenia (1), premature deaths attributable to smoking are projected to be more than 213 000 of the 427 000 smokers alive today (Table 1) and may increase in the absence of stronger policies.

TABLE 1.
Initial smoking prevalence and projected premature deaths

Smoking prevalence (%)			Projected premature deaths of current smokers (a)					
Male	Female	Total	Male ^b	Female ^b	Total ^b	Male ^c	Female ^c	Total ^c
29.5	21.1	427 088	119 048	94 438	213 544	77 381	61 423	138 804

^a Premature deaths are based on relative risks from large scale studies of high-income countries.
^b Premature deaths are based on relative risks from large scale studies of low- and middle-income countries.

Key findings

Within 15 years, the effects of individual tobacco control policies when fully implemented in line with the WHO FCTC (2) are projected to reduce smoking prevalence by:

- 15.7% by increasing excise cigarette taxes from its current level of 62% to 75% and prevent much youth smoking;
- 7.7% with more comprehensive smoke-free laws and stronger enforcement;
- 6.3% by increasing from a low-level to a high-level mass media campaign;
- 4.5% by requiring strong, graphic health warnings added to tobacco products;
- 3.1% by increasing from minimal provision to a well-publicized and comprehensive tobacco cessation policy; and
- 2.8% by banning just some forms of direct and indirect advertising to have a comprehensive ban on advertising, promotion and sponsorship that includes enforcement.

➔ **Monitor tobacco use**

The prevalence of current adult smokers (15 years and older) was 24.2% in 2014 (men: 27.5%; women: 21.1%) (1).

➔ **Protect people from tobacco smoke**

Health care facilities and education facilities including universities in Slovenia are completely smoke free (Table 3). In government facilities, indoor offices, restaurants, cafés, pubs, bars, and public transport, designated smoking rooms with strict technical requirements are allowed under the current legislation. Smoking violations consist of fines on the establishment and the patron. Funds are dedicated for enforcement; however, no system is in place for citizen complaints and further investigations (4).

Malaysia TQS Report

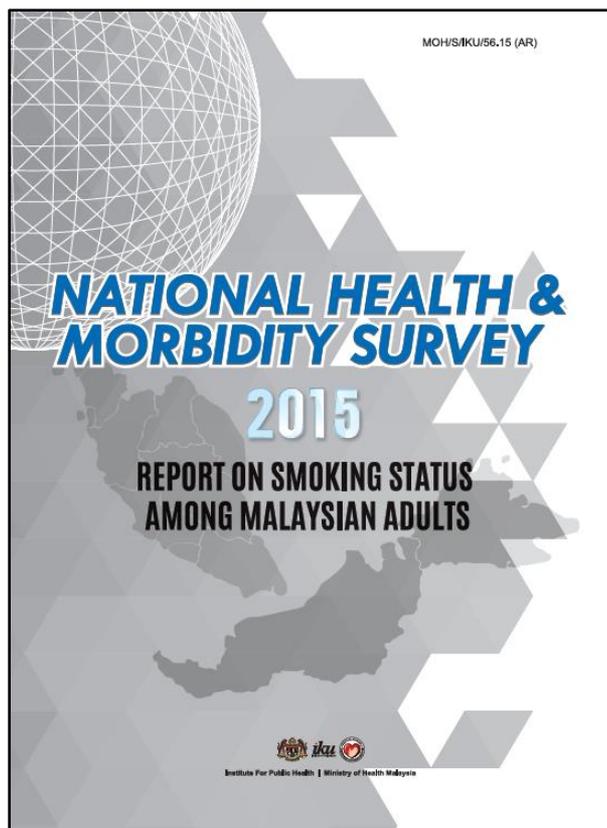

Table 1 Smoking Status by Gender

Smoking Status	Overall	Male	Female
		Percentage (95% CI)	
Current tobacco smoker	22.8(21.86,23.81)	43.0(41.38,44.6)	1.4(1.05,1.75)
Daily smoker	20.5(19.63,21.46)	38.8(37.25,40.35)	1.1(0.82,1.44)
Occasional smoker	2.3(2.02,2.6)	4.2(3.69,4.76)	0.3(0.16,0.46)
Occasional smoker, formerly daily	1.0(0.82,1.19)	1.8(1.49,2.2)	0.1(0.06,0.21)
Occasional smoker, never daily	1.3(1.1,1.55)	2.4(2,2.83)	0.2(0.08,0.33)
Current non-smoker	77.2(76.19,78.14)	57(55.4,58.62)	98.6(98.25,98.95)
Former smoker	2.4(2.11,2.71)	4.3(3.74,4.85)	0.4(0.27,0.6)
Former daily smoker	1.7(1.48,1.96)	3.2(2.74,3.65)	0.2(0.08,0.28)
Former occasional smoker	0.7(0.55,0.86)	1.1(0.86,1.4)	0.3(0.15,0.43)
Never smoker	74.8(73.75,75.8)	52.8(51.06,54.45)	98.2(97.82,98.58)

Monitoring of smoking prevalence is an integral part of smoking control as it will serve as indicator for the efficacy of anti-smoking policy and programmes. National Health and Morbidity Survey 2015 – Report on Smoking Status Among Malaysian Adults using Tobacco Question for Survey (TQS) was the latest survey to determine the prevalence of smoking in Malaysia. The non-institution men and women aged 15 years and above were the target population. Two stages proportionate to size sampling was employed to select

Czech Republic TQS Report

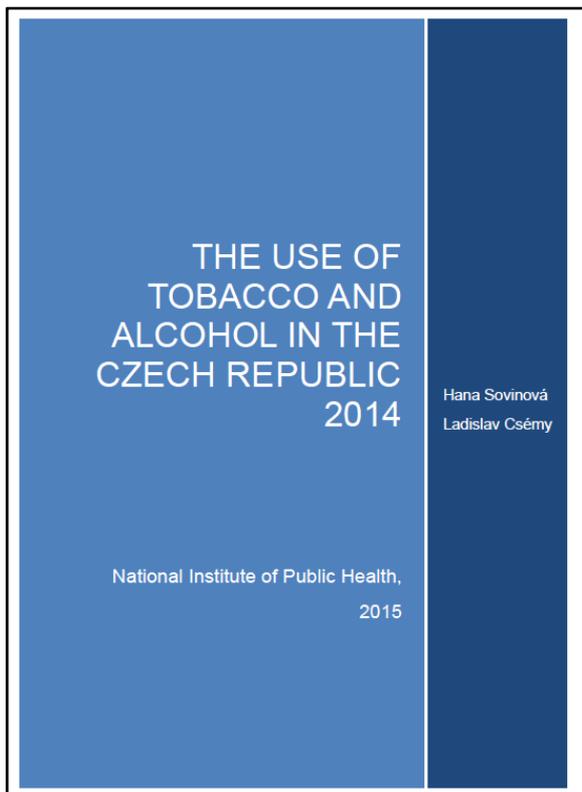

Table 1 Detailed summary of tobacco smoking products (Priority 1)

Range of smoking habits (in the last 30 days)	Total	Men	Women
	Percentage (95% CI)		
Current tobacco smokers	31.4 (29.3;33.6)	37.4 (34.2;40.7)	25.8 (23.0;28.7)
Daily smokers	23.5 (21.6;25.5)	28.2 (25.3;31.3)	19.0 (16.6;21.7)
Occasional smokers	8.0 (6.8;9.3)	9.2 (7.4;11.4)	6.8 (5.3;8.6)
<i>Occasional smokers who used to smoke daily</i>	3.2 (2.4;4.1)	4.0 (2.8;5.6)	2.4 (1.5;3.6)
<i>Occasional smokers who have never smoked daily</i>	4.8 (3.8;5.9)	5.1 (3.8;6.9)	4.4 (3.2;6.0)
Current smokers	68.6 (66.4;70.7)	62.6 (59.3;65.8)	74.2 (71.3;77.0)
Ex-smokers	14.7 (13.1;16.4)	15.5 (13.2;18.1)	13.8 (11.7;16.3)
<i>Daily ex-smokers</i>	7.6 (6.4;8.9)	9.2 (7.4;11.4)	6.0 (4.6;7.8)
<i>Occasional ex-smokers</i>	7.1 (6.0;8.4)	6.3 (4.8;8.1)	7.8 (6.2;9.8)
Lifelong non-smokers	53.9 (51.6;56.2)	47.1 (43.8;50.5)	60.4 (57.1;63.5)

Tobacco questionnaire description

This part of the questionnaire form focused on tobacco consumption and comprised a total of 22 questions covering all of the six MPOWER priorities.

Further Analysis & Research

Publications

- TQS data can be combined with other data sources to draft manuscripts for publication
- Consider collaborating with in-country academic institutions and other partners
- Opportunity to disseminate results to an academic audience

Brazil GATS and TQS Publication

Abstract

Objective. To describe the adult population perception of cigarette advertising at point of sale, according their tobacco-use status and socio-demographic characteristics such as sex, age, race/color, region, household location and schooling. **Materials and methods.** A multivariable analysis was carried out using data from the Global Adult Tobacco Survey in 2008 and the National Health Survey in 2013. **Results.** Both surveys showed that among nonsmokers: women, young adults and those who had over 10 years of schooling had more frequently noticed advertising of cigarettes at point of sale. It was also observed that among the population with fewer years of schooling these proportions increased significantly. **Conclusion.** A measure that completely bans tobacco advertising would be more effective to protect the vulnerable groups from tobacco consumption.

Keywords: tobacco-derived products publicity; tobacco industry; surveys and questionnaires; tobacco use

Resumen

Objetivo. Describir a la población adulta en relación con la percepción de la publicidad de cigarrillos en los puntos de venta, según el estado de consumo de tabaco y características sociodemográficas como sexo, edad, raza/color, región, ubicación del hogar y escolaridad. **Material y métodos.** Se realizó un análisis multivariado con los datos de la Encuesta Global de Tabaquismo en Adultos de 2008 y la Encuesta Nacional de Salud de 2013. **Resultados.** Ambas encuestas mostraron que entre los no fumadores: las mujeres, los adultos jóvenes y los que tenían más de 10 años de escolaridad notaron con más frecuencia la publicidad de cigarrillos en puntos de venta. También se observó que estas proporciones aumentaron significativamente entre la población con menos años de escolaridad. **Conclusión.** Una política que prohíba completamente la publicidad de cigarrillos sería más efectiva para proteger a los grupos vulnerables del consumo de tabaco.

Palabras clave: publicidad de productos derivados del tabaco; industria del tabaco; encuestas y cuestionarios; uso de tabaco
